

1. Construya la señal  $z(t) = x(t) + y(t)$  usando señales básicas

$$x(t) = u(t+2) - u(t+1)$$

$$y(t) = 2[u(t-1) - u(t-2)] - 2[u(t-2) - u(t-3)]$$

$$y(t) = 2u(t-1) - 4u(t-2) + 2u(t-3)$$

$$z(t) = x(t) + y(t)$$

$$z(t) = [u(t+2) - u(t+1)] + [2u(t-1) - 4u(t-2) + 2u(t-3)]$$

$$z(t) = u(t+2) - u(t+1) + 2u(t-1) - 4u(t-2) + 2u(t-3)$$

$$-\infty < t \leq -2 \Rightarrow t = 0$$

$$-2 < t \leq -1 \Rightarrow t = 1 \rightarrow x(t)$$

$$-1 < t \leq 1 \rightarrow t = 0$$

$$1 < t \leq 2 \rightarrow t = 2$$

$$2 \leq t \leq 3 \rightarrow t = -2$$

2. Grafique  $w(t) = z(t) \cdot r[z(t+K) - a]$  Con  $K = 2(a+1)$   
 $a = \text{ultimo numero de la cedula.}$

$$K = 2(3+1) = 8$$

$$w(t) = z(t) \cdot r[2t + 10]$$

$$w(t) = u(t+2) - u(t+1) + 2u(t-1) - 4u(t-2) + 2u(t-3) \cdot r[2t+10]$$
